

**REMARKS**

Claims 1-20 remain pending and at issue in the present application. Reconsideration and allowance of all pending claims are respectfully requested.

The Office rejects claims 1-20 under 35 U.S.C. §112, first paragraph, as failing to comply with the written description requirement. Applicant traverses this ground of rejection.

As an initial point, the Office has failed to apply the correct standard in concluding that the term "rigidly coupled" fails to comply with the written description requirement of 35 U.S.C. §112. In articulating the rejection, page 3 of the Office action states that:

The specification described the engagement on page 3 in lines 4-12 as being fixedly coupled, but there is no mention of a rigid or nonflexible connection. The only mention of rigid is in regards to the inner member.

The Office, therefore, argues that the absence of word-for-word support of the claimed term violates the written description requirement.

The M.P.E.P., however, clearly states that the subject matter of a claim need not be described literally. M.P.E.P. §2163.02. Instead, the proper standard for determining compliance with the written description requirement is whether the description conveys to one of ordinary skill, with reasonable clarity, that the applicant possessed the invention at the time the application was filed. Support for claimed subject matter may be found in the words and figures provided in the application. Furthermore, the Examiner has the burden of establishing a *prima facie* case by identifying the claim limitation at issue and providing reasons why a person of skill in the art would not have recognized that the inventor was in possession of the invention as claimed in view of the application as filed. In the present application, the Office failed to apply the proper standard for the written description requirement, and therefore the rejection based thereon must be withdrawn.

When the appropriate standard is applied, it is clear that the amended claims are fully and adequately described in the specification, and therefore comply with the written description requirement. Support for the "rigidly coupled" language is found throughout the specification and drawings as originally filed. First, page 6, lines 16-24, of the specification describe a rigid inner member 20 including a flange 78 defining a mounting surface 80. The

mounting surface is fixed to the seat 66 of the inner shaft 18. At page 9, lines 1-2, in describing operation of the catheter, the specification states, “The position of the catheter 100, and consequently the stent 108, is maintained due to its connection to the inner shaft 18 by way of the rigid inner member 20.” Figs. 9-11 illustrate how the rigid inner member 20 and inner shaft 18 maintain the same positional relationship both before and after movement of the outer shaft 16. From this disclosure, one of skill in the art would understand that the coupling between the rigid inner member 20 and the inner shaft 18 must be rigid in order to maintain the positional relationship illustrated in the drawings. Accordingly, under the appropriate standard, the claims as presented are fully and adequately described in the specification as filed, and therefore the written description rejection must be withdrawn.

Turning to the rejections based on the prior art, the Office has rejected claims 1-19 under 35 U.S.C. §103(a) as allegedly obvious over U.S. Patent No. 5,634,928 (“Fischell”) in view of U.S. Patent No. 5,026,377 (“Burton”). Applicant traverses this ground of rejection.

The cited prior art fails to disclose or suggest the “rigid inner member” as recited in each claim at issue. As defined in Webster’s Ninth New Collegiate Dictionary, an excerpt of which is attached hereto as an appendix, the term “rigid” is defined as “deficient in or devoid of flexibility.” Using this definition, the references relied on by the Office fail to disclose or suggest a rigid inner member that is also coupled to an inner shaft.

More specifically, the inner tube of Fischell includes a flexible portion, and therefore is not responsive to the rigid inner member. As noted above, the term rigid is defined as “deficient in or devoid of flexibility.” Fischell clearly states that the inner tube 11 includes a distal portion 11A that is “highly flexible.” (Fischell, column 4, line 12). Moreover, the flexible, distal portion 11A is not merely localized at a tip of the inner tube 11 but instead “extends for a considerable distance beyond the distal end of the balloon 16.” (Fischell, column 4, lines 7-9) Still further, it is clear that the inner tube 11 must include the flexible portion 11A because it is inserted into the vasculature of the patient, which may follow a tortuous path. Consequently, because the inner tube 11 includes a highly flexible distal portion 11A, it is not “deficient in or devoid of flexibility,” and therefore Fischell does not disclose or suggest a rigid inner member coupled to an inner shaft.

Burton similarly fails to disclose or suggest the rigid inner member specified in the claims at issue. Burton discloses a hollow core 5 that carries a grip member 9 for holding a stent 10. At least a distal portion of the hollow core 5 is inserted into the body cavity, which may follow a tortuous path, and therefore at least a portion of the hollow core 5 must be flexible. Thus, the hollow core 5 is not “deficient in or devoid of flexibility” and Burton does not disclose or suggest a rigid inner member coupled to an inner shaft.

Because Fischell and Burton, both individually and in combination, fail to disclose or suggest the claimed rigid inner member, it follows that the claims are not obvious over the cited prior art. Consequently, the prior art rejection asserted against the claims must be withdrawn.

Additionally, the cited prior art fails to teach or suggest the relationship between the inner and outer shafts as recited in the pending independent claims. Each independent claim requires the inner shaft to have distal end that is disposed proximally to the distal end of the outer shaft. Each claim further recites that the outer shaft has a first position, in which the distal end of the inner shaft is relatively farther from the distal end of the outer shaft, and a second position, in which the distal end of the inner shaft is relatively nearer to the distal end of the outer shaft. In both positions, however, the inner shaft distal end is disposed proximally to the distal end of the outer shaft.

The cited prior art does not teach this positional relationship between the inner and outer shafts. The inner tube 13 of Fischell has a distal end that is *always* disposed distally with respect to the distal end of the tube 24. See Fig. 1 of Fischell. Furthermore, Burton does not disclose both an inner and outer tube, and therefore fails to disclose the above-noted relationship therebetween. Thus, for at least this additional reason, the obviousness rejection based on the proposed combination of Fischell and Burton must be withdrawn.

Appl No 10/670,405  
Resp dated Nov 14, 2006  
Reply to Office action of Jul. 6, 2006

**CONCLUSION**

It is submitted that the present application is in good and proper form for allowance.  
A favorable action on the part of the Examiner is respectfully solicited

If, in the opinion of the Examiner a telephone conference would expedite prosecution of the subject application, the Examiner is invited to call the undersigned attorney

The Patent Office is hereby authorized to charge any deficiency in the fees filed, asserted to be filed or which should have been filed herewith (or with any paper hereafter filed in this application by this firm) to our Deposit Account No. 50-3629.

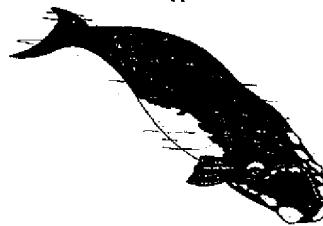

Dated: November 14, 2006

Respectfully submitted,

By   
Brent E. Matthias

**rill** *Vril* or *rille* *Vril*, *rīl* *n* [G *rille*, lit., channel made by a small stream, fr. LG, *rill*] (1868) : any of several long narrow valleys on the moon's surface

**rill-er** *Vril-ər* *n* (1538) : a little rill

**rim** *Vrim* *n* [ME, fr. OE *rima*; akin to ON *rimi* strip of land] (15c) **1** : the outer part of a wheel joined to the hub usu. by spokes **b** : a removable outer metal band on an automobile wheel to which the tire is attached **2 a** : the outer often curved or circular edge or border of something **b** : **BRINK** **3** : **FRAME** **3** (*rim*) — **rim-less** *lēs* *adj*

**rim** *vb* **rimmed**; **rim-ming** *vr* (1794) **1** : to serve as a rim for : **BORDER** (*cliffs rimming the camp*) **2** : to run around the rim of (putts that ~ the cup) ~ *vi* : to form or show a rim

**rimme** *Vrim* *n* [ME *rim*, fr. OE *hrim*; akin to *kreims* cream] (bef. 12c) **1** : **FROST** **ic** **2** : a far ice tuft on the windward sides of exposed mountains **3** : **CRUST**, **INCRASTATION** (*a ~ of snow*)

**rimme** *vr* **rimmed**; **rim-ming** *ca* (1755) **1** : to cover with a rim, rimer, rimester var of **RHYME**, **RHYMER** **2** : **rim-fire** *Vrim-fī* *adj* of a **cartridge** (1868) **3** : distributed in the rim of the shell **4** : **rimfire** *n* **rimland** *Vrim-land* *n* (1944) : a region on the land

**rimmed** *Vrimd* *adj* (1729) : having a rim — **us** (*dark-rimmed glasses*) (*red-rimmed eyes*)

**rim-rock** *Vrim-rak* *n* (1860) **1** : a top stratum of resistant rock of a plateau that outcrops to form the edge or face of a rimrock outcrop

**rimy** *Vri-mē* *adj* **rimber**; **est** [*OE hrimig*, fr. *hrim*] with rime : **FROSTY**

**ring** *Vind*, *rin* *n* [ME, fr. OE; akin to OHG *ring*] (bef. 12c) **1** : the bark of a tree **2** : a thin layer : **PEEL**, **CRUST** (grated lemon ~) — **ringed** *vr*

**ring-pest** *Vrin-dor-pest* *n* [G, fr. *rinder*, pl., fr. L *pestis*] (1865) : an acute infectious fibrinous disease caused by a virus and marked by diphtheritic infi-

**ring** *Vring* *n* [ME, fr. OE *hring*; akin to OHG *ring*] : curved — more at **CROWN** (bef. 12c) **1** : a circlet connecting, hanging, pulling, packing, or sealing ~ **2** : a circlet usu. of precious metal worn on a circular line, figure, or object (smoke ~) **b** : an ornament (*~ of suburbs*) **c** : a circular or spiral composition **2** : **ring** *vr* **ring** *in* **around** *4* **a** (*1*) : esp. for exhibitions or competitions; esp. : such a structure containing such a ring **b** : a square **3** : **ring** *vr* **ring** *in* **boxers** or **wrestlers** **contest** **5** : one of the concave sides of a ring **6** : **ANNUAL RING** **7 a** : an exclusive sons for a selfish and often corrupt purpose (as to wheat ~) **b** : **GANG** **8** : the field of a political party in the shape of a circle **10** : an arrangement in formulas or models in a cyclic manner called also **cycle** **11** : a set of mathematical elements under two binary operations of which the first is distributive with respect to the second **12** : rubber-covered metal rings suspended from a ceiling height of approximately eight feet above the floor, in a ring, swinging, and balancing feats in gymnastics **13** : a competition in which the rings are used (as Saturn) **14** : **ring-like** *Vring-lik* *adj*

**ring** *vb* **ringed**; **ringing** *Vring-ing* *vr* (15c) **1** : to form or take the shape of a ring

**ring** *vb* **rang** *Vrang*; **rung** *Vrang*; **ringing** *Vring-ing* *vr* **ring** *in* **ring** *on* **ring** *in* **ring** *around* **1** : to throw a ringer over (the horses or quoits) ~ *vi* **1** **a** : to move in a ring spirally **2** : to form or take the shape of a ring

**ring** *vb* **rang** *Vrang*; **rung** *Vrang*; **ringing** *Vring-ing* *vr* **ring** *in* **ring** *on* **ring** *in* **ring** *around* **1** : to sound resonantly or sonorously (the doorbell) **2** **a** : to be filled with a reverberating sound **b** : to have the sensation of a humming sound (his ears rang) **3** : to cause (as a waitress) **4 a** : to be filled with talk or repartee **b** : to have great renown **c** : expressive of some quality (*she rang in his ears*) **5** : to have a telephone call — usu. used with *up ~* **6** : to make a telephone call — usu. used with *up ~* **7** : to announce by or as if by ringing **8** : to repeat earnestly **5** : to summon esp. by bell **b** : to arouse a ringing **bell** — **ring down** the curtain : to conclude an action — **ring the changes** or **ring changes** : to make possible variations — **ring up** the curtain : to begin an action

**ring** *n* (1549) **1** : a set of bells **2** : a clear resonant sound resembling that made by vibrating metal **3** : resonance

**ring** *4* : a loud sound continued, repeated, or reverberating esp. character expressive of some particular quality (as familiar ~) **5** **a** : the act or an instance of ringing **b** : to give me a ~ in the morning

**ring-a-lie-vo**, *Vrig-o-lē-vo* (*Wōl*) or **ring-a-le** *vb* **ring** *in* **ring** *relieve*, fr. *ring* + *relieve* (ca. 1901) : a game in which two teams are given time to hide and are then sought by the other team who try to capture them, keep them confined, and keep them from being released by their

**ring-around-a-rosy** *Vrig-a-rain-dō-ro-zi* or *Vrig-a-tain-dō-dō-zi* (*lē* *lē* *lē* *n*) (1833) : a children's singing game in which the children dance around in a circle and at a given signal squat down

**ring-bark** *Vrig-bärk* *vr* (1892) : **GIRDLE**

**ring-binder** *n* (ca. 1929) : a loose-leaf binder in which

attached to a metal back hold the perforated sheets of paper

**ring-bolt** *Vrig-bolt* *n* (1626) : an eyebolt with a ring for

**ring-bone** *Vrig-bon* *n* (1523) : an exostosis on the back of the horse usu. producing lameness

**ring-dance** *n* (1600) : **ROUND DANCE**

**ring-dove** *Vrig-dov* *n* (1538) **1** : a common European

**lumba** *palumbus* with a whitish patch on each side of

wings edged with white **2** : a small dove (*Sturnus*) of

eastern Europe and Asia

**ringed** *Vrigd* *adj* (14c) **1** : encircled or marked with rings

**ringing** *Vrig-ing* *vr* (ca. 1901) : composed or formed of rings

**ring-ringer** *Vrig-ror* *n* (15c) **1** : one that sounds esp. by rings

**2** : one that enters a competition under false representation
